# epido[X]

Today knowledge workers are facing a lot of different challenges in the office environment. Turning paperbased processes into streamlined digital processes is one of the top priorities. Our solution epido[X] offers a powerful backend toolset to overcome 90% of the issues in this area. You are able to predefine processes and the resulting files are passed to your network folder or your business applications. You are looking for a powerful affordable scan solution? Choose epido[X].

Predefined workflows

Users can choose the predefined workflows right at the device. Even if there are last minutes changes of workflows users instantly have access to them. Documents are processed with an optical character recognition afterwards our artificial intelligence implementation routes the produced PDFs to the right business application, email addresses or network folders.

Your benefits

OCR

Get use of one of the strongest OCR engines in the market-place. Zonal OCR and template management are not the only functions that are supported. Document processing is scalable through multi-threading and support of shared servers.

Barcode

Professional batch scanning for small and medium to large organizations who need to scan, index and store documents quickly and easily. Added bar-codes are recognized and used for separation or data extraction.

AI Indexing

After being scanned, separated and cleaned, documents can be routed to multiple destinations simultaneously. Our AI extracts data in order to produce valuable metadata to support indexing prior to upload to an ECM.

About <e-dev/>:

<e-dev/> is a project of e-dox AG:

For not less than 25 years we work together with Xerox. We started in the 1990s with the sale of printing systems and that was followed by the offer of digitization services and workflow optimization. Eventually, at the level of individual development of apps for Xerox multifunctional devices, we have experienced every developmental stage since the beginning. We look back on a long lasting track record and experience with the Xerox technology as well as the business processes with Xerox.

Our expert knowledge lays the foundation for a professional and trustful collaboration.
